DETAILED ACTION

1. This communication is in response to Applicant's amendment filed on October 10, 2003. Claims 60-83 are pending in this application.

Drawings

2. The drawings filed on January 08, 1999 are acceptable subject to correction of the informalities indicated on the attached "Notice of Draftsperson's Patent Drawing Review," PTO-948 mailed on April 12, 2000, paper No. 4. In order to avoid abandonment of this application, formal drawings including corrections are required in reply to the Office action. The correction will not be held in abeyance.

Allowable Subject Matter

3. The following is a statement of reasons for the indication of allowable subject matter:
4. The prior art of record (Clark US Pat. No. 5,974,389) teaches a medical record management system and process by which electronic medical records are maintained and simultaneously accessed by multiple physicians for multiple patients. The system of Clark provides a vehicle for patient's records, charts, and insurance information to be sent from one physician to another.

Even though, the prior art of record teaches a medical record management system and process for performing the above mentioned steps, the prior art of record

Art Unit: 3624

fails to teach a computer implemented system for automating administrative procedures in a medical office comprising a management tracker module for automatically generating a report for showing the number of charts and age of the charts assigned to each department in the medical office in order for an office administrator to ascertain a workload status for each department. For these reasons claim 60 is deemed to be allowable over the prior art of record, and claims 61-83 are allowed by dependency.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee, and to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled Comments on Statement of Reasons for allowance.

ABSTRACT:

An ambulatory patient health monitoring system is disclosed wherein the patient (16) is monitored by a health administrator at a central station (20), while the patient (16) is at a remote location (10). Cameras (22) are provided at the patient's remote location (10) and at the central station (20) such that the patient (16) and the health administrator are in interactive visual and audio communication. A communications network (12), such as interactive cable television, is used for this purpose. Various medical condition sensing and monitoring equipment are placed in the patient's remote location (10), depending on the needs of the patient (16). The patient's medical condition is measured at the remote location (10) and the resulting data is transmitted to the central station (20) for analysis and display. In this manner, the health administrator can make "home visits" electronically, twenty-four hours a day.
